

Utility Management

Veolia offers a unique range of expertise in the sustainable management of resources. This expertise is backed by state-of-the-art technology and covers a complete array of solutions to meet the needs of individuals and industries around the world.

Total Water Management

Industry is constantly challenged to improve productivity and efficiency, reduce costs comply with environmental standards and ensure water supply everywhere on a site at all time.

Veolia, with the ability to provide full water services, is at your side to help you define the most appropriate solution regarding your water and wastewater treatment facilities and execute the solutions.

Type of services depends on client needs. We can offer from full partnership where we operate and maintains your facilities and guaranteeing treatment performance to partial services such as staff dispatch, various types of maintenance and inspection. All the offers are tailor made.

Waste Management

Finding solutions for beneficial reuse or recycling waste into new raw materials and fuels protects and preserves our environment by limiting our dependence on landfills, conserving natural resources and decreasing our community's environmental footprint.

Veolia creates dedicated waste recycling solutions for each customer's specific needs. The team works in conjunction with other branches of the group to reduce all liquid and solid wastes produced by an industrial production process and provide the best technical solutions in waste control, facility operation and management.

Outsourcing waste management to Veolia allows industrial clients to focus on their core business and improve their competitiveness by saving on raw materials and avoiding any potential loss of customers.

Veolia maintains a proven record of compliance with health, safety and environmental regulations. Veolia helps you to ensure that the handling, transport, recycling, reuse and disposal of all waste products meets state and federal regulations Protect against liability.
